ASSIGNMENT #1

Project Title: Real Estate Website Development

PENDING

PROJECT DESCRIPTION

Develop a modern, responsive, and user-friendly Real Estate Website that allows users to explore properties for sale and rent. The website should provide an attractive interface where visitors can browse property listings, view property details, search for properties according to their requirements, and contact agents for further information.
The goal is to create a professional real estate platform with an intuitive user interface, organized property listings, and a smooth browsing experience across desktop, tablet, and mobile devices.

REQUIRED PAGES AND FEATURES

1. Home Page

- Professional navigation bar with logo and menu links.
- Hero section with headline and background image.
- Property search form (location, type, price, purpose).
- Featured properties section.
- Categories (houses, apartments, commercial, plots).
- About the agency section & customer testimonials.
- Call-to-action section and footer.

2. Properties Listing Page

- Card-based layout (image, title, location, price, specs).
- Filters for property type, price range, and location.
- Sorting options (price low to high, newest listings).
- Pagination or "Load More" button.

3. Property Details Page

- Large property image gallery.
- Title, price, and complete address.
- Detailed property description and specs.
- Features (parking, garden, security, furnished).
- Agent contact info & visit schedule buttons.
- Map section showing location (optional).

4. About Us Page

- Agency introduction & company overview.
- Mission and vision statements.
- Team members or real estate agents showcase.
- "Why Choose Us" key highlights section.

5. Contact Us Page

- Contact form with name, email, phone number, and message fields.
- Office address, phone number, and email address details.
- Google Maps integration & social media links.

6. ADDITIONAL FEATURES

- **Responsive Design:** Optimized layout for mobile, tablet, and desktop viewports.
- **Interactive UI:** Dynamic search/filter interfaces, smooth navigation, hover effects, and subtle animations.
- **Form Validation:** Client-side validation for all input forms (Contact, Search, Visit Scheduling).
- **Design System:** Modern typography, consistent color palette, and reusable visual components.
- **Optional Enhancements:** Wishlist / Save Property toggles and Login/Register interface designs.

TECHNICAL REQUIREMENTS

- Use HTML, CSS, and JavaScript (or an assigned frontend framework).
- Write clean, reusable, and well-organized code structure.
- Maintain a consistent design system throughout the site.
- Use reusable property card components where appropriate.
- Ensure accessibility, responsiveness, and cross-browser support.
- Use realistic sample property data and high-quality images.

EXPECTED DELIVERABLES

- Complete frontend source code repository.
- All required responsive pages and layouts.
- Working navigation, filtering, and form validations.
- Organized project folders and component files.
- Detailed `README.md` file with setup instructions.
- Portfolio-ready screenshots of the finished application.

PROJECT OBJECTIVE

The primary objective is to demonstrate frontend development proficiency, responsive UI design execution, component reusability, and the capacity to construct a professional, user-focused real estate platform.

Note: This is a demo project focused purely on frontend implementation and functional UI interactions. Backend infrastructure, live databases, user authentication services, and payment gateways are not required unless explicitly specified in future assignments.
